July 2026 Project Update

Blue Rock WRRF Project Remains on Schedule

Construction continues to make steady progress at LASA's Blue Rock Water Resource Recovery Facility (WRRF), with the project remaining on schedule approximately six months into the first year of construction.

Major milestones include the installation of stormwater management facilities and substantial progress on site excavation. The project's largest excavation is now nearly complete, and crews will begin preparing excavation areas for concrete placement over the coming months.

Project Highlights

- Construction remains on schedule
- Stormwater facilities have been installed
- Major excavations are nearing completion

Collection System Improvements Continue

In addition to work at the Blue Rock WRRF, LASA has recently completed two collection system rehabilitation projects that strengthen long-term reliability throughout the wastewater system.

Little Conestoga Interceptor Rehabilitation Project
East Hempfield & Manheim Townships

- Completed the fifth and final phase of the five-year rehabilitation project
- Rehabilitated **5,209 feet** of interceptor sewer, **15 manholes**, and **four stream crossings**
- Completed **$60,000 under budget**

Manor Street Sewer Rehabilitation Project
Columbia Borough

- Rehabilitated **3,632 feet** of 8-inch sewer main and **72 service laterals**
- Completed within budget

Looking Ahead

Construction at the Blue Rock WRRF will continue throughout 2026 as crews prepare excavation areas for concrete placement and advance the next phase of the facility's modernization.

These projects are part of LASA's long-term investment to strengthen system reliability, protect public health, and improve water quality throughout the region.
